‘Mosaics in Science’ Program

The National Park Service’s ‘Mosaics in Science’ Diversity Internship Program provides college students and recent graduates who are underrepresented in STEM career fields with on-the-ground, science-based work experience related to natural resources in the National Park System.

Participants spend 11 weeks working on a STEM project in a national park. After completing their projects, participants travel to the District of Columbia for a career workshop that provides opportunities to present their work, learn about how to apply for a federal job, and meet National Park Service staff and management. Participants receive a stipend of $4,800, plus housing and travel allowances.

To be eligible, applicants must be citizens or permanent residents of the United States between 18 and 35 years old. The applicants must attend or recently have graduated from an undergraduate institution, or they must be in the early stages of their career. Eligible students and young adults from groups historically underrepresented in STEM fields are strongly encouraged to seek nomination. These groups include but are not limited to African-American, American Indian/Alaska Native, Asian, Hispanic, and Native Hawaiian/Other Pacific Islander.

Applications are due **Feb. 19, 2016**.
