Title of Study: Gender Differences in Academic Performance

Experiment Open Date: July 19, 2010  Experiment Close Date: August 10, 2010

(IRB) Approval Number: 15-SS-133

Participation Credits: 1 credit

Time (duration): Approximately 10 minutes

Brief Description of Study:
The purpose of this study is mainly to compare academic performance between genders at a postsecondary level. Although academic competency can be defined from different aspects, in our study, for the benefit of significant statistical results, we choose to use grade point average (GPA) as a primary measurement. Participants will complete a brief questionnaire survey that will take approximately 20 questions. In addition to a few questions concerning gender and previous GPA, the survey will include significant demographic information relevant to the result of the study, including age, ethnicity, family life, occupation, income and overall health.

Participation Criteria:
Those who are 18 years of age and older who have completed (or are currently enrolled in) at least one semester of postsecondary schooling may participate in this study.
