Title of Study: Associations Between Levels of Intrinsic Religiosity and Sexual Proficiency

Experiment Open Date: July 14, 2015  Experiment Close Date: August 10, 2015

(IRB) Approval Number: 15-SS-210

Participation Credits: 2 credits

Time (duration): Approximately 30 minutes

Brief Description of Study:
Each participant will be asked to complete a lexical decision task. During the lexical decision task, participants will be repeatedly presented with a fixation point, followed by a letter string; lasting 40 Ms. Participants will identify the letter string as a word or non-word by striking a specified key. Upon completion of the lexical decision task, participants will complete a survey. Results from the lexical decision task pertaining to reaction time and accuracy will be compared with the participant’s scores on the survey. Some of the words used in the lexical decision task may evoke feelings of arousal or sexual thoughts in participants. Those dealing with maladaptive sexual behaviors or addictions could be particularly at risk.

Participation Criteria:
Students between the ages of 18 to 50 may participate in this study.
