Diagnosing Disease

Scott Moore (Medical Laboratory Sciences) and Matt Romaniello (History)

“Diagnosing Disease in the Past and Present” will take an interdisciplinary approach to the medical humanities. You will be able to apply diverse methodologies to the social, cultural, and medical responses to diseases such as influenza, malaria, smallpox, and tuberculosis. A final research project will allow an opportunity to research a current disease confronting our local or global community.

Tues./Thurs. • 2:30-3:45
