

INTRO. TO SCIENTIFIC RESEARCH

PHYS/GEO/CHEM 2820

Are You Interested in Research in the Physical Sciences?

Research projects involve a whole host of skills: from doing a literature review before you begin to giving a presentation at a conference or to your Department and your peers!

Along the way, you need even more skills: documenting process, samples and data collection, estimating uncertainties, deciding which types of graphs and charts will be most effective.

You also need some "soft skills": working in a group, giving and receiving feedback, finding motivation when your plans, once again, didn't work as you expected.

This class will introduce you to all of these skills, and also help you figure out how to find a mentor in your discipline!

When: Tuesday and Thursday, 1:30-2:45

Who: This time...Dr. Palen, Department of Physics and Astronomy, TY 328
